

## SmartScope ZIP<sup>®</sup> 300

SmartScope ZIP 300 is a high performance floor model system designed for high accuracy and repeatability on larger, heavier parts. ZIP 300 also offers:

- **Built-in Measurement Stability** – The heavy-duty steel frame, granite surface plate and cast-iron worktable provide a very thermally and mechanically stable platform.
- **Accurate Video Metrology** – AccuCentric<sup>®</sup> motorized zoom lens automatically compensates magnification for each zoom position. ZIP 300 offers optical configurations to suit a wide range of applications.
- **Multisensor Versatility** – Optional touch probes, lasers and micro-probes.

Accuracy is evaluated with a QVI verification procedure where "L" is measured length in millimeters. Specifications apply within the rated environment. Standard optical specifications apply at the maximum optical magnification of the standard configuration. XY Accuracy applies with an evenly distributed load up to 5 kg in the standard measuring plane. Depending on load distribution, accuracy at maximum payload may be less than standard. The standard measuring plane is defined as a plane that is within 25 mm of the worktable surface.

\*Lenses and lens attachments can be manually interchanged to change magnification and working distance. Adapter tubes can be manually changed to change magnification without impacting work distance, but unlike lens changes, adapter tube changes require optical system realignment and recompensation. \*\*FOV sizes are 15% smaller in Measure-X. \*\*\*SP25, Feather Probe, Rainbow Probe, and TeleStar Probe only supported in ZONE3.
